Transforming Data to Power Scholarly Publishing

Simplify the complex network of organizations in scholarly communications

Scholarly publishing relies on data and systems, and successful publishers and intermediaries are able to leverage their information assets, gaining deep insight into their business, efficiencies across workflows, and a competitive advantage in the market. By helping to transform raw data into an asset, Ringgold empowers scholarly publishers – and the partners that serve them - to face the new interconnected and data-driven environment. Normalizing and enriching organization-related data is a critical step in treating your data like the valuable asset it is.

One Standard. Multiple Applications

Identify is a robust authority file with information that can benefit your entire organization:

- ❖ Sales & Marketing
- ❖ Editorial
- ❖ Membership & Development
- ❖ Data Governance & IT
- ❖ Business Analytics

Solve strategic & tactical business challenges

- Explore the market & reveal opportunities
- Enhance data quality
- Facilitate data interoperability
- Support data governance & adhere to standards
- Underpin authoritative reporting
- Normalize records & eliminate duplicates
- Understand related organizations
- Communicate with external partners
- Standardize affiliations for authors, members, and other individuals
